

PROJECT 3 **Somebody Is 2.7 Kilometres Away** Neary says: "We never share your location."

Name: _____

- A** Japanese Bridge **2.7 km**
- B** Tra Que Herb Village **1.5 km**
- C** Cua Dai Beach **2.3 km**

Q1 Two answers before one

Using only readings **A** and **B**, mark *both* places the two arcs cross. Name them.

First crossing: _____

Second crossing: _____

Q2 Where is he?

Now bring in reading **C**. One crossing survives. Finish the sentence.

Mr Bowen is at _____

Q3 How sure are you, in metres?

Your three arcs will not meet at a point – they bound a small patch. Measure it, then convert it.

	across (mm)	in metres
widest way across the patch		

Show the conversion:

Tear this off and hand it to the Early Years team.

TREASURE CLUE CARD

Team: _____

From **P** (_____) it is _____ m

From **Q** (_____) it is _____ m

From **R** (_____) it is _____ m

Q4 What this means for your phone

An app shows only how far away you are, to the nearest 0.1 km. Why is that still worth being careful about? Name one thing you would check in its settings.

Part 2 The treasure hunt – planning grid

Three fixed points, **not in a straight line**. Describe each one well enough for a stranger to stand on it. Distances to the nearest 10 cm.

	What it is, exactly	Distance (m)
P		
Q		
R		

Q5 What actually happened

Did your clues work first time? If they went to the wrong place first, *which* wrong place – and why would two distances allow it?
